Working key

- Observation
- Action required
- Verified result
- Question to revisit

Entry date: _____ **Page:** _____

1. Sensor calibration

Objective: compare the reference probe with the field unit.

Setup: 22.0 °C, still water, three-minute equilibration.

Result summary: The field unit read 0.18 units above the reference.

Entry date: _____ **Page:** _____

2. Field observations

Location: _____ **Weather:** _____

Use the dotted area for sketches, measurements, and notes.

Entry date: _____ **Page:** _____

3. Follow-up questions

1. Which calibration point contributes most to the offset?
2. Should the next run include a second reference instrument?
3. What evidence is needed before the result is archived?
