January 5, 2026 ◇ **Monday** ◇ **Sunny** **Home**

Today I started keeping a journal with this template.

What I like about it

Dated entries render with a coloured tag showing the day of the week, and *italic*, **bold**, and `inline code` all work without any extra markup commands.

Note Text after a bracketed tag like this one starts a note line.

> Text after three angle brackets is boxed as a coloured aside, useful for a remark that should not interrupt the flow of the entry.

January 6, 2026 ◇ **Tuesday** ◇ **Cloudy** **Office**

A short entry the next day, to show consecutive dated entries flowing one after another down the page.
