Pocket Songbook

Your Name

2026

A reusable songbook starter

This example shows the two-stage workflow of `liederbuch`: define a song once inside a `liederbuch` environment, then print it wherever it belongs with `\LBsong`. Replace the sample metadata and lyrics with material you are entitled to publish.

Harbour Light
Your Name

1. The harbour keeps a patient light along the tide-worn stone; it marks the way for evening boats and makes the dark their own.

2. When morning turns the water gold and gulls begin to rise, the same small lamp is folded up inside the waking skies.
Original 2026

Next steps

Add more `lied` definitions to the songbook, then call them with the same three identifiers: songbook name, number, and variant. The package also provides `\notenzeile` for aligning lyrics beneath a stave image.
