A Modular ThuThesis Starter

Alex Morgan

2026

Abstract

This compact starter demonstrates the ThuThesis class for a modular graduate thesis. Replace the metadata in `thusetup.tex`, then split the body into chapters and add references as your project grows.

Contents

1 Introduction **1**

2 Methods **2**

3 Conclusion **3**

A Checklist **4**

Chapter 1

Introduction

Tsinghua thesis projects benefit from separating metadata, front matter, chapters, bibliography, appendices, and declarations. The upstream repository includes complete Chinese examples in the `data` directory.

Chapter 2

Methods

Let n be the number of experiments and r the average review time. A simple planning model is $T(n) = T_0 + rn$.

Table 2.1: Example thesis milestones.

Milestone	Weeks
Proposal	2
Experiments	8
Writing	4

Chapter 3

Conclusion

Use the official ThuThesis manual and current Tsinghua requirements when customizing this starter.

Appendix A

Checklist

- Set degree, department, discipline, author, and supervisor metadata.
- Add chapters under the project structure used by the upstream sample.
- Run the final bibliography and PDF review before submission.
